

RANS S-18 Stinger

\$39,000

This airplane is a taildragger. It is N registered, has an FAA Airworthiness Certificate, and requires a pilot's license to fly. The kit was purchased from RANS Aircraft located in Hays, Kansas. I am a licensed A&P and the original owner/builder.

It is very fun to fly. It is very stable and forgiving. It performs wonderfully with only one pilot on board. However, it can carry two people very comfortably.

The airplane is made using aluminum tubing and Dacron fabric covering. It has 3-axis dual controls using stick and rudder.

The engine is an aviation Rotax 582. It is a 65hp 2 cylinder 2 stroke. The engine is water cooled with dual electronic ignition and two carburetors.

If you would like more information about this aircraft you can look at the RANS website at RANS.com. Or you can look at YouTube videos by searching for RANS S-18.

The airplane is located at Pam's Place Airport: 78I on the sectional chart.

Pam's Place is 22nm from KIND on the 236 degree radial.
